<sup>1</sup>Director, Network for Computational Modeling in Social and Ecological Sciences, Tempe, AZ, USA.

<sup>2</sup>Director, Urban Eco-Evolutionary Research Network, Seattle, WA, USA.

<sup>3</sup>President, International Environmental Modelling and Software Society, Manno, Ticino, Switzerland.

<sup>4</sup>Managing Director, Computer Simulation and Advanced Research Technologies, Sydney, NSW, Australia.

<sup>5</sup>Head, Systems Modeling and Simulation at the Brain and Mind Centre, University of Sydney, NSW, Australia.

<sup>6</sup>Executive Director, Consortium of Universities for the Advancement of Hydrologic Science Inc., Cambridge, MA, USA.

<sup>7</sup>President, Operational Research Society, Birmingham, West Midlands, UK.

<sup>8</sup>Director, Open Geographic Modeling and Simulation at Nanjing Normal University, Nanjing, Jiangsu, China.

<sup>9</sup>President, Society for Modeling and Simulation International, Suffolk, VA, USA.

<sup>10</sup>Governing Committee, Mathematical Epidemiology Subgroup of the Society for Mathematical Biology, West Lafayette, IN, USA.

<sup>11</sup>Secretary-General, International Society for Ecological Modeling, Severna Park, MD, USA.

<sup>12</sup>Director, Business Intelligence Team of the City of Sheffield, Sheffield, South Yorkshire, UK.

<sup>13</sup>Director, Center on Social Dynamics and Policy at the Brookings Institution, Washington, DC, USA.

<sup>14</sup>Chair, Planet Texas 2050 Bridging Barriers Program at the University of Texas, Austin, TX, USA.

<sup>15</sup>Director, Social System Design Lab of Washington University, St. Louis, MO, USA.

<sup>16</sup>Director, System Dynamics Group at the University of Bergen, Bergen, Norway.

<sup>17</sup>Research Investigator, HealthPartners Institute, Minneapolis, MN, USA.

<sup>18</sup>Director, Center for Social Dynamics and Community Health of the University of Pittsburgh, Pittsburgh, PA, USA.

<sup>19</sup>Director, Systems Science in Public Health and Health Economics Research Consortium, Sheffield, South Yorkshire, UK.

<sup>20</sup>Executive Director, System Dynamics Society, Albany, NY, USA.

<sup>21</sup>Director, Center for Open Science, Charlottesville, VA, USA.

<sup>22</sup>Director, Computational Epidemiology and Public Health Informatics at the University of Saskatchewan, Saskatoon, SK, Canada.

<sup>23</sup>Founder, System Science in Health, Saskatoon, SK, Canada.

<sup>24</sup>Director, Intelligent Systems and Geosciences Research Coordination Network, Austin, TX, USA.

<sup>25</sup>President, European Social Simulation Association, Zürich, Zürich, Switzerland.

<sup>26</sup>President, Society for Medical Decision Making, Bridgewater, NJ, USA.

<sup>27</sup>Executive Director, Earth Science Information Partners, Boulder, CO, USA.

<sup>28</sup>Co-Leader, Agricultural Model Intercomparison and Improvement Project, New York, NY, USA.

<sup>29</sup>President, International Society for the Systems Sciences, Ashland, KY, USA.

<sup>30</sup>Director, Center for Community Health Integration at Case Western Reserve University, Cleveland, OH, USA.

<sup>31</sup>Executive Director, Community Surface Dynamics Modeling System, Boulder, CO, USA.

A hallmark of science is the open exchange of knowledge. At this time of crisis, it is more important than ever for scientists around the world to openly share their knowledge, expertise, tools, and technology. Scientific models are critical tools for anticipating, predicting, and responding to complex biological, social, and environmental crises, including pandemics. They are essential for guiding regional and national governments in designing health, social, and economic policies to manage the spread of disease and lessen its impacts. However, presenting modeling results alone is not enough. Scientists must also openly share their model code so that the results can be replicated and evaluated.

Given the necessity for rapid response to the coronavirus pandemic, we need many eyes to review and collectively vet model assumptions, parameterizations, and algorithms to ensure the most accurate modeling possible. Transparency engenders public trust and is the best defense against misunderstanding, misuse, and deliberate misinformation about models and their results. We need to engage as many experts as possible for improving the ability of models to represent epidemiological, social, and economic dynamics so that we can best respond to the crisis and plan effectively to mitigate its wider impacts.

We strongly urge all scientists modeling the coronavirus disease 2019 (COVID-19) pandemic and its consequences for health and society to rapidly and openly publish their code (along with specifying the type of data required, model parameterizations, and any available documentation) so that it is accessible to all scientists around the world. We offer sincere thanks to the many teams that are already sharing their models openly. Proprietary black boxes and code withheld for competitive motivations have no place in the global crisis we face today. As soon as possible, please place your code in a trusted digital repository (*1*) so that it is findable, accessible, interoperable, and reusable (*2*).
